Guidelines for Authors

The Bovine Practitioner is the official, open access publication of the American Association of Bovine Practitioners (AABP). The AABP is a professional non-profit organization representing cattle veterinarians. The focus of The Bovine Practitioner is to promote the art and science of bovine medicine, surgery, reproduction, diagnostics, beef and milk production and animal welfare. The Bovine Practitioner also considers manuscripts covering similar topics for small ruminants.

Executive Editor:
Dr. Fred Gingrich

Associate Editors:
Dr. Sarah Capik   dr.capik@aabp.org
Dr. Virginia Fajt   dr.fajt@aabp.org
Dr. Miles Theurer   dr.theurer@aabp.org
Dr. Aurora Villarroel   dr.villarroel@aabp.org

Copy Editor
Ms. Geni Wren   gwren@aabp.org

Submission of Manuscripts

Manuscripts should be submitted electronically through the Online Journal System which publishes The Bovine Practitioner.

Authors should register for the Online Journal System site at this link. Click on the red submission button in the left margin after registering to make a new submission. Authors will then be prompted to upload the article. New submissions will be notified via email. An associate editor will then review the article for submitting to peer reviewers.

IMPORTANT NOTE: The Bovine Practitioner uses a masked review process in which reviewers and authors are masked to identification. It is the authors’ responsibility to remove identifying information such as places, names, research sites, locations, institutions, etc. Replace all identifying information with capitalized X’s (e.g., XXXXXXXX) in the submitted manuscript; this will assist the authors when adding back the identifying information in the publishing phase. Authors will be requested to acknowledge that they are responsible for this masking procedure during the submission process. The article will be returned for resubmission if masking instructions are not followed.

Types of Articles

1. Research articles. Should have the following sections: Introduction, Materials and Methods, Results, Discussion, and References.
a. Experimental and observational studies
b. Systematic and scoping reviews

2. Descriptive studies.
   a. Case reports. Describes new syndromes/diseases or unusual cases that will benefit the practitioner of known syndromes/diseases. This may include diagnostics, clinical signs, necropsy information, therapeutics, or management practices. Analytical statistics from case report are not often possible to generate; however, descriptive statistics should be presented when appropriate.
   b. Case series. Should contain detailed descriptions of selection criteria of at least five cases (case definition), along with descriptive statistical analysis.
   c. Innovative techniques. Articles on “new innovative techniques” can include such things as new diagnostics, practice tips or “how to” utilize innovation in practice; this can include such things as a surgical procedure, a diagnostic technique or use of a spreadsheet to monitor health and productivity of a herd, among others.

3. Review articles. A review article should be comprehensive (pros and cons) and critical; the authors should ensure that described information presented accurately represents what is and what isn’t reported in the literature to avoid bias. Facts and conclusions presented should be sufficiently detailed to provide practitioners useful information without additional literature search.

Content Guidelines

1. Use of reporting guidelines. Peer reviewers will be asked to refer to published reporting guidelines for specific article types during the review process. Authors are encouraged to use the published reporting guidelines available at MERIDIAN (Menagerie of Reporting Guidelines Involving Animals), and EQUATOR (Enhancing the Quality and Transparency of Health Research) Network:
   a. CONSORT (Consolidated Standards of Reporting Trials)—for clinical trials
   b. REFLECT (Reporting Guidelines for Randomized Controlled Trials for Livestock and Food Safety)—for clinical trials in livestock and food safety
   c. PRISMA (Preferred Reporting Items of Systematic Reviews and Meta-analyses)—for systematic reviews and meta-analyses
   d. STARD (Standards for the Reporting of Diagnostic Accuracy Studies)—for diagnostic test evaluation
   e. STROBE (Strengthening the Reporting of Observational Studies in Epidemiology)—for cross-sectional, case-control, and cohort studies
   f. ARRIVE (Animal Research: Reporting of In Vivo Experiments)—for all studies involving laboratory animals
   g. SRQR (Standards for Reporting Qualitative Research)—for all studies involving qualitative research
   h. SAMPL (Statistical Analyses and Methods in the Published Literature)—for all studies

2. Materials and Methods. The experimental design in the Materials and Methods should be described in sufficient detail to allow other researchers to duplicate the study. Statistical analysis should be appropriate for the study and described so that the reader can duplicate the
analysis. The statistical model, blocks, and experimental unit should be designated; commonly used statistical methods need not be described in detail but should be properly and adequately referenced. The manuscript should include masking (blinding) procedures, method of randomization, and statistical power of the study.

3. Animal Care. A description of animal care should be included in the Materials and Methods.
   a. Manuscripts will be rejected without consideration for publication if there is evidence of animal abuse during the research study.
   b. Studies conducted on animals in research facilities must be approved by an institutional animal care and use committee or the relevant equivalent and should state this in the Materials and Methods. If the study was performed on a commercial dairy, farm, ranch or feedlot facility, the manuscript should include enough information to verify that adequate animal husbandry (housing, feed, and water) was provided.
   c. When euthanasia or depopulation of animals is required, the method used should be stated in the Materials and Methods. Euthanasia methods must be in compliance with AABP Guidelines for Humane Euthanasia of Cattle or the AVMA Guidelines for the Euthanasia of Animals, or the AVMA Guidelines for the Depopulation of Animals. New euthanasia and depopulation approaches may be considered for submissions through the New Innovative Techniques article.

4. Drug, chemicals or, biologicals, or technology use
   a. Active ingredient(s), doses, routes of administration, frequency (if administered more than once), and duration of drugs and chemicals should be detailed in the Materials and Methods section. Stating that drugs or biologicals were used “according to label directions” is insufficient. Vaccines should be described in enough detail that a reader could compare to a product with a different trade name or if the product changes over time (e.g., strains, serotypes, etc.).
   b. Trade names should be identified by superscript and lettered in the text, with the product trade name, manufacturer, and city and state of the corporate office listed as endnotes. Trade names of commercial products, such as animal health products, test kits and devices, should not be used in the title, text, tables, or figures unless necessary for clarity.
   c. Manufacturer name at the time the study is performed should be indicated in the Materials and Methods.
   d. Manuscripts reporting on the use of compounded drugs will use the conditions described in “AAVTP position paper regarding the evaluation of scientific manuscripts that involve the administration of compounded drugs to animals” L. Trepanier and K. Pasloske, Journal of Veterinary Pharmacology and Therapeutics, 27: 357, 2004.

Manuscript Preparation

1. Format
   a. Documents should be prepared and submitted in Microsoft Word in English.
   b. Times New Roman at 12-point font size should be used.
   c. Lines and pages should be numbered continuously.
d. Lines should be double spaced with 1-inch (2.5-cm) margins.

e. Units of measure
   i. Body weights and temperatures must be reported in traditional US units (lb., °F), with metric units (Système International) units reported afterward in parentheses.
   ii. Doses and dosages must be reported on a mg/lb. basis with mg/kg following in parentheses.
   iii. Numbers must be spelled out when they begin a sentence, such as (e.g., Forty-nine percent). Other numbers must be written as digits, (e.g., 0.52, 1.5, 7). The word “to” should be used to indicate a range, use the word “to” instead of a hyphen, (e.g., 5.6 to 7.5 lb., not 5.6 – 7.5 lb.).

f. Capitalization and italics usage
   i. Proper nouns, genus names, breeds and registered names should be capitalized.
   ii. Latin terms such as genus, species and abbreviations should be placed in italics.

2. Title page. The title of the article should describe the content without being excessively long.
   a. Capitalize only the first letter in the title, proper nouns, genus names, and breeds.
   b. If the article is accepted, a list of all authors should include the first, middle initial and last name/s as customary for their country of citizenship; author degrees beyond the bachelor’s degree, and any specialty certification recognized by the country of certification; affiliation of each author, such as institution, company, or practice will need to be provided by the submitting author to AABP staff during the copyediting and galley proof stage.
   c. If the article is accepted, the submitting author will need to list a corresponding author including contact email. Include additional contact information only if affiliation is different from that listed in the authors list.

3. Abstract. All articles should begin with an Abstract that does not exceed 250 words.

4. Key words. Authors should provide 2-5 keywords following the Abstract.

5. Abbreviations.
   a. Abbreviations should be used when a term is repeated three or more times. An abbreviations list should be provided and will be provided at the beginning of the article in the published version.
   b. Most abbreviations should be avoided in the title and abbreviations should not be used to begin a sentence.

6. Acknowledgements should be placed before References in the manuscript, and include:
   a. Appreciation to persons who are not authors but made significant contributions to the study or manuscript.

7. Funding. A declaration of full or partial funding of the study.

8.Acknowledgement of any conflicts of interest. Authors must declare any conflicts of interest in the manuscript as well as when submitting the paper electronically. *The Bovine Practitioner*
adheres to the International Committee of Medical Journal Editors' reporting of conflicts of interest. Authors should review these recommendations prior to manuscript submission.

9. Author contributions.
   a. The primary author will assign contributors to the article. Authorship should only be granted if 1 (a, b, and/or c), 2, and 3 are met:
      1a. substantial contribution to conception and design
      1b. substantial contribution to acquisition of data
      1c. substantial contribution to interpretation of data
      2. drafting the manuscript or revising it critically for important intellectual content
      3. approval of the final version to be published
   b. Contributors who do not meet the criteria for authorship should be acknowledged but not listed as authors.

10. End notes should be lettered and used to cite:
    a. Non-official references such as personal communications, dissertations, or thesis references.
    b. Brand names or commercial names of such things as drugs, vaccines, laboratory test kits and devices.
    c. Statistical or other software including version and manufacturer.

11. References. References should be formatted in the style of the Journal of the American Veterinary Medical Association.

12. Tables and figures.
    a. Tables must be prepared using the table features in Microsoft Word. Each table and figure must be submitted on a separate page after the article text in the same document.
    b. Every table and figure should have a number and legend. Table and figure legends should be descriptive enough for the table or figure to stand-alone or be self-explanatory.
    c. Footnotes in tables and figures should be indicated by superscript symbols in the following order: asterisk (*), dagger (†), double dagger (‡), section (§), parallel (∥), paragraph (¶), and then each paired with itself. Statistical difference (rows or columns) should be noted using lower case letters.
    d. If the article is accepted, the author must provide high resolution figures for publication.

13. The journal is not currently able to publish online only supplementary figures or data. Submission of those items is not accepted.

After Manuscript Submission

1. Peer review of manuscripts
   a. All manuscripts that have been determined to be potentially suitable for publication will be sent to at least two reviewers. Reviewer comments and recommendations are
strongly considered when making the decision whether to accept or reject a manuscript for publication.

b. The Bovine Practitioner uses an anonymous review process, whereby the reviewer does not know the identity of the authors, and vice versa. Authors’ names and affiliations will be removed from the manuscript prior to sending for peer review.

c. Every effort is made to screen reviewers to minimize potential conflicts of interest.

d. Reviewers will recommend to either 1) accept, 2) accept with minor revision, 3) revise and resubmit the manuscript for a second review, or 4) to reject a manuscript.

e. The final decision to accept or reject a manuscript is the responsibility of the Associate Editors.

f. A list of the reviewers will be published annually.

2. Copyediting

a. The Bovine Practitioner reserves the right to copyedit manuscripts. The copyedited manuscript is returned to the author for review and approval prior to publication.

b. Authors are responsible for accuracy of the final galley proof prior to publication.

Careful scrutiny should be given to the accuracy of doses, units of measure, matching of superscript to the correct reference, and spelling and syntax.

3. Copyright considerations

a. Published manuscripts will be copyrighted by The Bovine Practitioner. The transfer of the copyright will occur when a manuscript is accepted for publication. All authors are required to acknowledge copyright transfer. Government employees are exempt from the copyright requirement.

b. The author is required to obtain written permission for use of copyrighted material that is to be used included in the manuscript. Documentation of permission to use copyrighted material must be submitted prior to publication, and credit must be given to the source of borrowed material in the manuscript.

4. Commercial advertisements

a. The major source of funding The Bovine Practitioner is from the AABP membership dues; however, income is also derived from the sale of commercial ad space in the journal.

b. To avoid conflict of interest, the AABP employs the services of a contract advertising agent to solicit and sell advertising space in the journal.

5. Page charges and author benefits

a. There are no page charges for articles published in The Bovine Practitioner.

b. No honorarium is paid to authors or co-authors for articles published in The Bovine Practitioner.

c. Authors wishing to use their material for a proceedings, book or other scholarly work will be given permission following written request by the author. Requests should be sent to the Executive Editor of The Bovine Practitioner.
